Entity	Greenhaul Waste Services Pty Ltd
ABN	80 730 176 876
Registered office	41 Gilbert Road, Wingfield SA 5013
Reporting period	Month and four months ended 31 October 2025
Prepared by	Priya Iredale, Executive Director and Chief Financial Officer
Prepared for	Board of Directors; Ironleaf Partners Pty Ltd as manager of Ironleaf Partners Fund II
Date of issue	14 November 2025
Status	Unaudited management accounts, Version 1.0

Document details

1. Summary and basis of preparation

This pack reports the trading result of Greenhaul Waste Services Pty Ltd and its subsidiaries for October 2025 and for the four months of FY26 to date. All figures are in A$ millions unless stated. The financial year ends 30 June. Results are compared with the FY26 budget and with the same period in FY25. The pack is unaudited. The most recent audited accounts are the FY25 financial statements, audited by Brandt Kessler Chartered Accountants and dated 29 August 2025.

The acquisition of the group by Ironleaf Partners Fund II has not yet completed. The accounts below therefore reflect the existing capital structure and exclude acquisition costs. A pro forma view of the proposed capital structure is set out in section 6 for reference only.

- Year-to-date revenue was A$39.8M, A$0.6M (1.5%) ahead of budget and 12.4% above the prior year.
- Year-to-date EBITDA was A$5.1M, A$0.2M (4.1%) ahead of budget, at a margin of 12.8% against a budgeted 12.5%.
- Year-to-date free cash flow before financing and tax was A$2.6M, A$0.3M ahead of budget.
- Year-to-date revenue and EBITDA each represent 33.6% of the FY26 forecast of A$118.4M and A$15.2M. The full-year forecast is unchanged.
- Last twelve months EBITDA to October 2025 was A$14.4M.

2. Trading result

Revenue growth was driven by recurring collection contracts, which benefited from indexation applied in July and from new commercial customers won during the second half of FY25. Transactional volumes were marginally ahead of budget. Every cost line was A$0.1M over budget, which is consistent with the higher activity level. The net effect was an EBITDA outcome A$0.2M better than budget.

EBITDA margin for the period was 12.8%, compared with 12.1% in the same period last year. Disposal costs were 29.9% of revenue, against 29.9% last year, which indicates that levy and gate fee increases have been passed through to customers broadly in line with cost. Fuel was 8.3% of revenue. Diesel pricing ran slightly above the budget assumption, and the overrun was absorbed by fuel adjustment charges on contracted customers.

A$M	YTD actual	YTD budget	Variance	YTD FY25
Revenue	39.8	39.2	0.6	35.4
Disposal and landfill levies	(11.9)	(11.8)	(0.1)	(10.6)
Employee costs	(12.3)	(12.2)	(0.1)	(11.2)
Fuel	(3.3)	(3.2)	(0.1)	(3.1)
Fleet maintenance, occupancy and overheads	(7.2)	(7.1)	(0.1)	(6.2)
EBITDA	**5.1**	**4.9**	**0.2**	**4.3**

Summary profit and loss, four months to 31 October 2025. Positive variances are favourable.

2.1 Revenue by stream

Contracted and recurring collection represented 71.1% of year-to-date revenue, in line with the 71% assumed in the FY26 forecast. Transactional skip bin and construction and demolition work was 1.0% ahead of budget. Order books for the remainder of the calendar year remain steady, although we note that this stream is the most exposed to a slowdown in construction activity. Commodity sales matched budget. The FY26 budget assumes conservative recycled material prices, and no upside from price recovery has been taken.

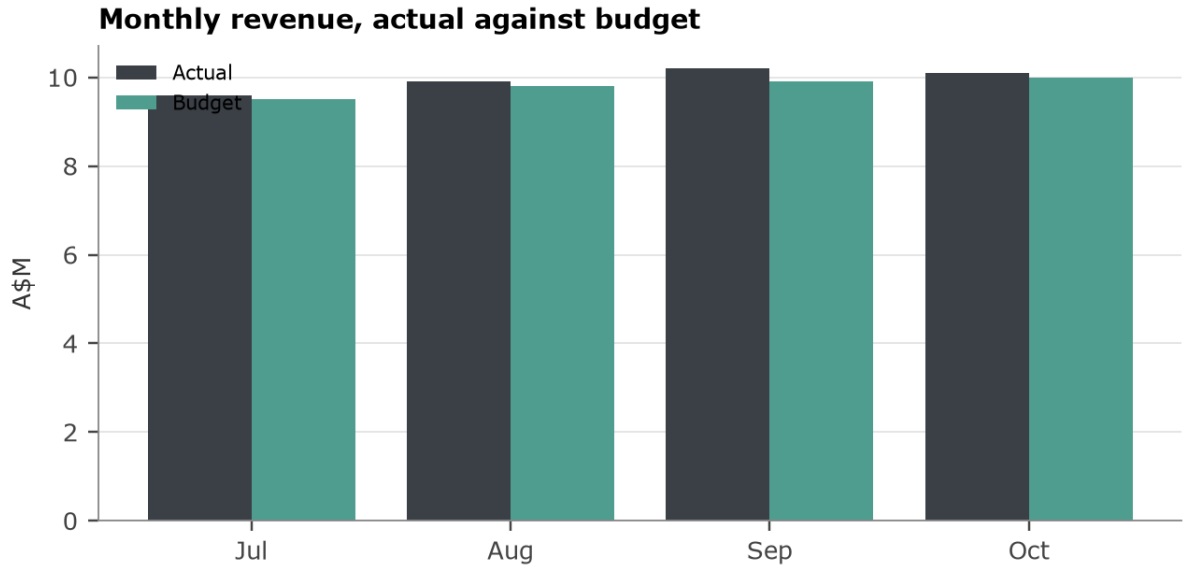

A$M	YTD actual	YTD budget	Variance	YTD FY25
Contracted and recurring collection	28.3	27.8	0.5	24.8
Skip bin and construction and demolition	9.9	9.8	0.1	9.2
Sorted cardboard, metals and plastics	1.6	1.6	0.0	1.4
Total revenue	**39.8**	**39.2**	**0.6**	**35.4**

Revenue by stream, four months to 31 October 2025

3. Monthly trend

A$M	Jul	Aug	Sep	Oct
Revenue, actual	9.6	9.9	10.2	10.1
Revenue, budget	9.5	9.8	9.9	10.0
EBITDA, actual	1.2	1.3	1.3	1.3
EBITDA, budget	1.2	1.2	1.2	1.3

Monthly revenue and EBITDA against budget

Revenue was ahead of budget in each of the four months.

October revenue of A$10.1M was A$0.1M ahead of budget, and EBITDA of A$1.3M matched budget at a margin of 12.9%. September was the strongest month for revenue, helped by higher construction and demolition volumes. October was marginally lower on fewer working days and a slower week of skip bin demand in Victoria.

4. Cash flow and capital expenditure

Cash conversion, measured as operating cash flow before interest and tax over EBITDA, was 92% against a budget of 94%. The shortfall reflects trade debtors, which increased in line with higher September billing. Debtor days were 46 at 31 October against a budget of 45. No individual customer balance is of concern, and the amounts overdue by more than 60 days are below 4% of the ledger.

A$M	YTD actual	YTD budget	Variance
EBITDA	5.1	4.9	0.2
Movement in working capital	(0.4)	(0.3)	(0.1)
Operating cash flow before interest and tax	4.7	4.6	0.1
Maintenance capital expenditure	(1.9)	(2.0)	0.1
Growth capital expenditure	(0.2)	(0.3)	0.1
Free cash flow before financing and tax	**2.6**	**2.3**	**0.3**

Summary cash flow, four months to 31 October 2025

Maintenance capital expenditure of A$1.9M was A$0.1M below budget, mainly because two vehicle deliveries moved from October into November. The full-year maintenance capex budget remains A$6.1M. Growth capital expenditure of A$0.2M related to container stock and depot works at Dandenong South. Corrigan Mott Engineering, as independent technical and capex adviser to the lenders, has reviewed the fleet replacement programme underlying the maintenance budget.

5. Operations

- Fleet: 74 collection vehicles are in service across the Wingfield, Mount Gambier and Dandenong South depots. Fleet availability averaged 94% over the period.
- Customers: approximately 3,400 commercial, construction and local government customers are serviced. No contract of significance was lost in the period.
- People: headcount was 286 full-time equivalent employees at 31 October. Driver recruitment remains the main labour constraint, and overtime was marginally above budget at Dandenong South.
- Wingfield materials recovery facility: throughput was in line with budget. There were no reportable incidents or EPA licence notices in the period. Annual fire safety and insurer inspections are scheduled for the second half of the financial year.

6. Pro forma capital structure and leverage

The proposed senior secured acquisition term facility of A$57.0M is intended to part fund the acquisition at an enterprise value of A$112.0M. The facility has a 60 month tenor with a bullet repayment and 1.0% per annum amortisation. Pricing and covenant terms remain indicative until the term sheet is finalised, which is expected on 28 November 2025. The figures below are pro forma and have not been prepared on a statutory basis.

Sources	A$M	% of total
Senior term facility	57.0	48.7%
Sponsor equity	60.0	51.3%
Total sources	**117.0**	**100.0%**

Pro forma sources

Net debt at close is expected to be A$56.0M, being the A$57.0M facility less A$1.0M of balance sheet cash. The facility represents 50.9% of enterprise value. Enterprise value is 7.4 times FY26 forecast EBITDA.

Uses	A$M	% of total
Enterprise value, including refinancing of existing bank debt	112.0	95.7%
Transaction costs	4.0	3.4%
Cash to balance sheet	1.0	0.9%
Total uses	**117.0**	**100.0%**

Pro forma uses

Leverage on last twelve months earnings is above the 3.7x measured on the FY26 forecast, because the LTM figure has not yet captured the improvement expected through the balance of the year. To meet the FY26 forecast, the remaining eight months need to deliver revenue of A$78.6M and EBITDA of A$10.1M, or about A$1.26M of EBITDA a month. The October run rate is A$1.3M a month.

Measure	Basis	Result
Net leverage	FY26 forecast EBITDA of A$15.2M	3.7x
Net leverage	LTM EBITDA to October 2025 of A$14.4M	3.9x
Interest cover	FY26 forecast	3.2x

Indicative credit metrics at close

7. Risks and outlook

- Landfill levy and regulatory change: no levy changes beyond budget assumptions took effect in the period. Contracts that allow levy pass-through remain the main protection, and we are monitoring those that do not.
- Commodity prices: recycled material revenue is volatile. The FY26 forecast uses conservative prices, and year-to-date sales are on budget.
- Construction exposure: the transactional stream is 24.9% of year-to-date revenue and would be affected by weaker construction and demolition activity.
- Fuel and labour: diesel and driver costs are the main operating cost pressures. Indexation clauses lag actual cost movements by up to one quarter.
- Leverage headroom: net leverage of 3.7x at close leaves limited headroom to the proposed covenant if FY26 EBITDA falls short of forecast.

Management expects to deliver the FY26 forecast of revenue of A$118.4M and EBITDA of A$15.2M, a margin of 12.8%. The budget phasing for the second half carries the benefit of the January price review for contracted customers and a full year of the new Victorian contracts. Results to 30 November 2025 will be issued in December.
