Status	Draft v1, subject to review
Property	Harbour Point, Burpengary East QLD 4505
Borrower entity	Harbour Point Developments Pty Ltd, ABN 43 501 397 885
Prepared for	Tidewater Communities
Prepared by	Westgate Valuation Advisory, Brisbane
Reference	WVA-BNE-26-0912-D1
Date	12 August 2026
Valuation type	Desktop, indicative; no inspection
Basis of value	Englobo value as is; gross realisation of stages 1 and 2 (incl. GST)

Details of this valuation

1. Scope and limitations

This is a draft desktop assessment prepared without an inspection of the property and without a review of civil engineering or cost information. It is issued as Draft v1 for review by Tidewater Communities and by our internal valuation review panel. It has not been signed off and the figures in it may change.

The draft must not be relied on for mortgage security purposes. A full valuation, including an inspection of the site, a review of the development approval and conditions, and a review of a quantity surveyor's cost report, would be required by any lender before the property could be taken as security.

The assessment relies on information supplied by Tidewater Communities and on our own database of lot sales. We have not verified the supplied information with council, the vendor or the sales agent. Where we refer to matters that we understand to be pending or in progress, the statement is made on the sponsor's advice and has not been confirmed with the relevant authority.

This draft adopts an earlier and lower average lot price than we expect to carry into the final report. The reasons for this are set out in sections 5 and 6. Readers should treat all values in this document as provisional. A final desktop valuation will be issued once the review is complete, and it will supersede this draft in full.

2. Property and instructions

2.1 The site

Harbour Point is a 46.2 hectare site at Burpengary East in the Moreton Bay region of South East Queensland. It is planned as a 412-lot residential community delivered in four stages. Tidewater Communities acquired the land in February 2025 for A$38.5M, through Harbour Point Developments Pty Ltd.

Stages 1 and 2 together comprise 210 lots, with an average lot size of 412 square metres. Stages 3 and 4 make up the remaining 202 lots. Those stages are under assessment by council and have no approval. They are not part of the funding request and we have given them no development value in this draft.

2.2 Instructions and project context

We have been asked to provide an indicative englobo value on an as is basis for the whole site, and an indicative gross realisation for stages 1 and 2. We understand Tidewater is considering a senior land and civil works facility of A$65.0M for stages 1 and 2, including the refinance of an existing A$22.0M land loan, over a tenor of 24 months. The project data below was supplied by the sponsor and has not been tested by us.

Item	Supplied data
Site area	46.2 ha
Total lots / stages	412 lots / 4 stages
Lots in stages 1 and 2	210
Land cost (February 2025)	A$38.5M
Civil works, stages 1 and 2	A$31.6M
Total project cost, stages 1 and 2	A$90.5M
Sponsor equity	A$25.5M
Facility sought	A$65.0M
Existing land loan to be refinanced	A$22.0M

Table 1. Project data supplied by the sponsor (unverified)

3. Planning status

We understand that development approval for stages 1 and 2 is expected to be issued by council on 14 August 2026. We have not sighted the approval or its conditions. Our indicative values for stages 1 and 2 assume that the approval is issued substantially as applied for, with no conditions that materially change the lot yield, the lot sizes or the infrastructure obligations.

Development applications for stages 3 and 4 remain under assessment. The englobo value in section 4 reflects the risk that these stages are approved later than expected, approved with a lower yield, or refused. A buyer of the englobo site would price that uncertainty into any offer.

Zoning, infrastructure charges, trunk infrastructure requirements and any conditions on the timing of works have not been reviewed. These matters can move englobo values materially and are listed in section 9 as outstanding items.

4. Indicative values

The table below summarises our indicative values for this draft. Gross realisation is stated including GST and before selling costs, holding costs and the cost of civil works. It is a measure of expected lot sale proceeds, not of profit or of residual land value.

Measure	Draft v1
Indicative englobo value as is	A$41.5M
Lots in stages 1 and 2	210
Adopted average lot price	A$541,000
Indicative gross realisation, stages 1 and 2 (incl. GST)	A$113.6M
Average lot size	412 sqm

Table 2. Indicative values, Draft v1

We have adopted an average lot price of A$541,000 for stages 1 and 2. Across 210 lots this gives an indicative gross realisation of A$113.6M.

The indicative englobo value of A$41.5M equates to approximately A$898,000 per hectare across the 46.2 hectare site, or about A$100,700 per planned lot across all 412 lots. It is A$3.0M, or 7.8%, above the February 2025 acquisition price of A$38.5M. We consider a modest uplift reasonable given the passage of time and the progress made on planning for stages 1 and 2, but the size of the uplift depends on the approval being issued as expected.

For context only, the A$65.0M facility sought would represent 57.2% of the draft gross realisation for stages 1 and 2. This ratio is not a lending assessment. It is shown so that the sponsor can see the scale of the request against the lower price assumption in this draft.

5. Valuation approach

5.1 Englobo value

The englobo value as is has been assessed primarily by direct comparison, using per hectare and per lot rates from sales of englobo parcels in the northern growth corridor of Moreton Bay. A hypothetical development cross-check was then applied, using the adopted lot price, the supplied civil works cost, a contingency allowance, selling and holding costs and a developer's margin appropriate to a staged project at this scale.

The cross-check is sensitive to the lot price and the civil works cost. Because no quantity surveyor's report has been reviewed, we have not relied on the supplied civil works figure of A$31.6M beyond testing it for reasonableness against costs per lot on comparable projects. The workings of the cross-check are not reproduced in this draft and will be set out in the final report.

5.2 Gross realisation

Gross realisation has been assessed by applying an average lot price to the 210 lots in stages 1 and 2. The adopted price reflects lot sizes of around 412 square metres, the sales evidence in section 6, and the current state of the market for first-home buyer product in the area.

No allowance has been made for price growth between now and settlement. Prices are assumed to be stated at current market levels, and the realisation is assumed to be achieved through a staged release over the construction period.

5.3 Pre-sales

The sponsor has advised that pre-sales for stages 1 and 2 opened in August 2026 and that 64 lots, or 30.5% of the 210 lots, are under contract with 10% deposits. We have not sighted the contracts, the trust account records or the conditions attached to the contracts. We have therefore given no weight to the pre-sales in the adopted lot price, and they should not be read as confirming it.

6. Sales evidence

The table below sets out the comparable lot sales we have considered. They are all in the northern Moreton Bay and Caboolture corridor, and they are the projects most likely to compete with Harbour Point for the same buyers.

Project	Date	Lots sold	Average price
Narangba Rise, St 4	2026-06	52	A$571k
Caboolture West, St 2	2026-03	88	A$539k
Burpengary Fields, St 6	2025-11	41	A$582k
Morayfield Grove, St 3	2026-05	64	A$528k
Deception Bay Heights	2025-09	37	A$596k

Table 3. Comparable lot sales

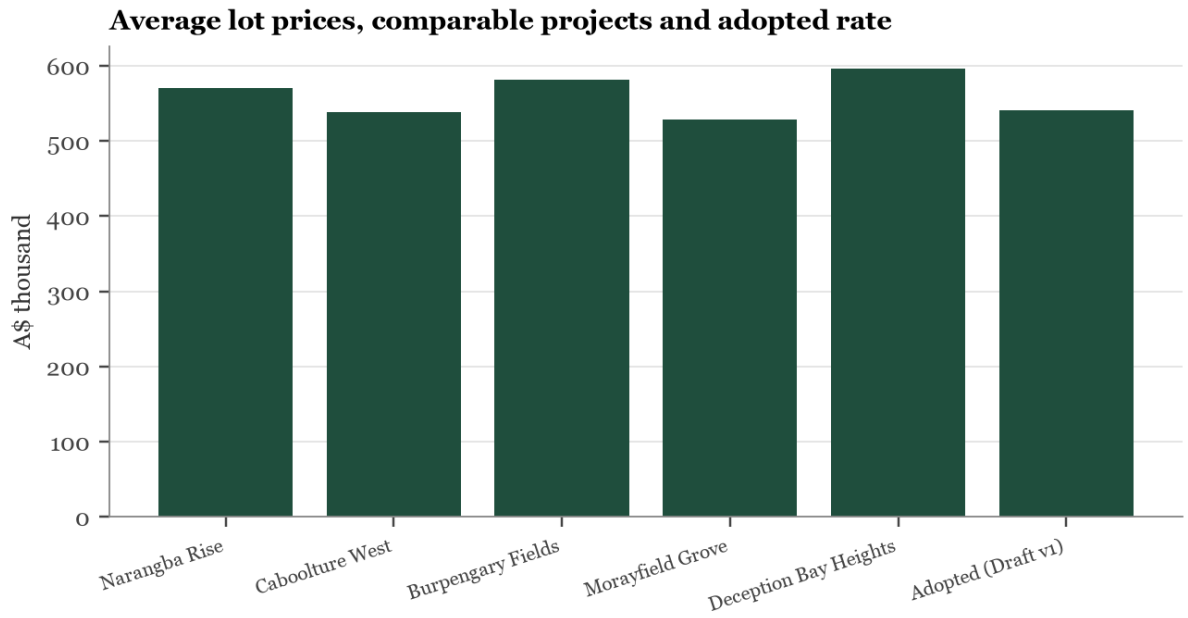

Figure 1. Average lot prices, comparable projects, against the adopted Draft v1 rate

The five comparable projects average A$563,200 per lot, with a range from A$528,000 to A$596,000. The adopted rate of A$541,000 sits below the mean of the evidence and between the two lowest results, Caboolture West Stage 2 at A$539,000 and Morayfield Grove Stage 3 at A$528,000. It is about 3.9% below the mean.

We have placed weight on the two lower results for this draft for three reasons. First, they are the most recent projects of a similar scale and buyer profile to Harbour Point. Second, sales rates across the corridor have slowed through 2026 and developers have increased incentives, which means that headline prices may overstate net prices received. Third, we have not yet adjusted the evidence for differences in lot size, frontage, proximity to services and the quality of the surrounding estate. Until those adjustments are made, a conservative position is appropriate.

The evidence from Burpengary Fields and Deception Bay Heights is older, with sales dating from late 2025, and the prices achieved there are higher than those in the more recent Caboolture West and Morayfield Grove sales. We have not treated the older results as a reliable guide to current pricing for this draft. We expect to revisit the weighting of this evidence in the review.

7. Market considerations

The sales evidence supports a lot price in the range of the mid A$500,000s, but the market has become more difficult. Sales rates have slowed through 2026, incentives have increased and buyers are taking longer to commit. New releases in Caboolture West and Narangba will compete directly with projects in Burpengary East, and a number of these releases target the same first-home buyer segment as Harbour Point.

Higher interest rates continue to weigh on borrowing capacity, which tends to affect smaller and lower-priced lots less than larger lots, but affects the affordability of the whole house and land package. Projects with strong pre-sales and staged releases are best placed to hold their pricing. Harbour Point is planned in stages, which should assist, but the benefit depends on the quality of the pre-sales, which we have not verified.

We have not prepared a forecast of lot prices in this draft. The adopted rate is a current market assessment only.

8. Sensitivity

The table below shows how the indicative gross realisation for stages 1 and 2 changes with the average lot price. A softening of lot prices by 5% from the adopted rate would reduce the indicative gross realisation by approximately A$5.7M, and a softening of 10% would reduce it by approximately A$11.4M.

Price change	Avg lot price	Gross realisation	Change
+5%	A$568,050	A$119.3M	+A$5.7M
Adopted	A$541,000	A$113.6M	Nil
-5%	A$513,950	A$107.9M	-A$5.7M
-10%	A$486,900	A$102.2M	-A$11.4M

Table 4. Sensitivity of gross realisation to average lot price, 210 lots, incl. GST

The englobo value is more sensitive to the lot price than the gross realisation is, because the land value is the residual after the cost of civil works, contingency, finance and selling costs, and a developer's margin. A fall in lot prices of 5% would reduce the residual by considerably more than 5%. The size of that effect depends on the cost inputs, which we have not been able to review.

9. Key assumptions and outstanding matters

The values in this draft depend on the following assumptions. Each would need to be confirmed before a full valuation could be issued.

- Development approval for stages 1 and 2 is issued on or about 14 August 2026 for 210 lots, with an average lot size of 412 square metres and without conditions that materially change yield or cost.
- Stages 3 and 4 are not approved. No development value has been attributed to them beyond what a buyer of the englobo site would pay for the prospect of approval.
- Civil works for stages 1 and 2 can be delivered for the supplied A$31.6M. No quantity surveyor's report has been reviewed.
- The site is free of contamination, flooding constraints, unusual ground conditions and encumbrances that would affect value. No title search or environmental review has been carried out.
- The reported pre-sales of 64 lots are genuine, unconditional and supported by 10% deposits held in trust. They have not been verified and are not relied on in the adopted lot price.
- Lot prices are stated at current market levels with no allowance for growth, and lots are released and settled progressively across the delivery period.

The following items are outstanding and would be addressed in the final report or in a full valuation:

- Inspection of the site and surrounding area.
- Review of the development approval, its conditions and the infrastructure charges notice.
- Review of a quantity surveyor's report and the construction programme.
- Sighting of pre-sale contracts and trust account records.
- Size, frontage and location adjustments to the sales evidence.
- Review of the sponsor's staging and release strategy.

10. Status of this draft and reliance

This document is Draft v1 and is subject to review. It adopts a lower average lot price than we expect to carry forward, and its figures are provided to Tidewater Communities for discussion only. Tidewater should not provide this draft to a financier or any other third party as a statement of value. If it is provided, it must be accompanied by this statement of its status.

The final desktop valuation will supersede this draft in full. Any figure, ratio or conclusion drawn from this draft should be replaced with the corresponding figure in the final report once issued.

This document is confidential and has been prepared for Tidewater Communities only. Westgate Valuation Advisory accepts no responsibility to any other party. Liability is limited by a scheme approved under professional standards legislation.
