Borrower	Greenhaul Waste Services Pty Ltd (following post-acquisition group restructure)
ABN	80 730 176 876
Registered address	41 Gilbert Road, Wingfield SA 5013
Sponsor	Ironleaf Partners Pty Ltd as manager of Ironleaf Partners Fund II
Sector	Industrials, commercial waste collection and recycling
Proposed facility	A$57.0M senior secured acquisition term facility, 60 months
Prepared by	Quillwood Credit Partners, Origination and Credit
Prepared for	Investment Committee
Date	12 November 2025
Version	1.0 for approval

Transaction and document details

1. Executive Summary

Quillwood Credit Partners (Quillwood) seeks Investment Committee approval to provide a A$57.0M senior secured acquisition term facility to fund part of the acquisition of the Greenhaul group by Ironleaf Partners Fund II (the Sponsor). The facility has a tenor of 60 months, a bullet repayment profile with 1.0% per annum scheduled amortisation, and indicative pricing of 3 month BBSW plus 4.75% per annum, a 2.00% establishment fee and a 1.00% per annum commitment fee on undrawn amounts. Greenhaul Waste Services Pty Ltd (Greenhaul) will be the borrower once the post-acquisition group restructure is complete.

Greenhaul is an Adelaide-headquartered provider of commercial and industrial waste collection, skip bin hire and materials recovery services across South Australia and Victoria. It operates three collection depots at Wingfield SA, Mount Gambier SA and Dandenong South VIC, a materials recovery facility (MRF) at Wingfield, and a fleet of 74 collection vehicles. It services approximately 3,400 commercial, construction and local government customers and employs 286 full-time equivalent staff. About 71% of FY26 forecast revenue is contracted or recurring collection revenue. The balance comes from transactional skip bin and construction and demolition work, supplemented by sales of sorted cardboard, metals and plastics.

The acquisition values the group at an enterprise value of A$112.0M, equal to 7.4 times FY26 forecast EBITDA of A$15.2M. Total uses are A$117.0M, funded by the Quillwood facility of A$57.0M (48.7%) and Sponsor equity of A$60.0M (51.3%). Net debt at close is A$56.0M after A$1.0M of balance sheet cash, giving net leverage of 3.7 times FY26 forecast EBITDA and a loan to value ratio (LVR) of 50.9% on the purchase price. Forecast FY26 interest cover is 3.2 times.

Principal credit strengths

- Substantial equity cushion: Sponsor equity of A$60.0M represents 51.3% of total funding, and the facility is 50.9% of enterprise value.
- Recurring earnings base: 71% of FY26 forecast revenue (approximately A$84.1M) is contracted or recurring collection revenue across about 3,400 customers, so no single customer dominates the book.
- Integrated asset base: the Wingfield MRF, three depots and a 74 vehicle fleet support collection, sorting and recovery, with plant and fleet orderly liquidation value (OLV) of A$24.8M, or 43.5% of the facility limit.
- Established operator: the business has traded since 2009, commissioned the Wingfield MRF in 2015, and has integrated an acquisition (Central Highlands Waste Pty Ltd, 2019) and a new depot (Dandenong South, 2022).
- Independent validation: financial due diligence, enterprise and asset valuations and a technical and capex review have been completed by independent advisers.

Principal credit concerns

- Leverage depends on forecast growth: net leverage is 3.7 times on FY26 forecast EBITDA but 4.1 times on FY25 EBITDA of A$13.6M. The forecast assumes revenue growth of 10.8% and EBITDA growth of 11.8%.

- Thin free cash flow after capex: FY26 maintenance capex of A$6.1M absorbs 40.1% of forecast EBITDA, leaving A$9.1M before interest, amortisation, tax and working capital.
- No dedicated revolving facility is proposed, and balance sheet cash at close is only A$1.0M.
- Exposure to landfill levy changes, commodity prices, construction activity, diesel costs and MRF operating risk, each addressed in Section 7.

On balance, we regard the transaction as a credit that sits within Quillwood's appetite for sponsor-backed, senior secured mid-market lending, subject to the conditions and covenant package in this paper. The principal sensitivity is the delivery of FY26 EBITDA, and our recommended covenant levels and conditions are designed to address that.

2. Recommendation

The deal team recommends that the Investment Committee approve the following, subject to the conditions precedent and subsequent in Section 9:

- A senior secured acquisition term facility of A$57.0M to Greenhaul Waste Services Pty Ltd, with a final maturity 60 months from financial close and scheduled amortisation of 1.0% per annum (A$0.57M per annum), with the balance repayable at maturity.
- Pricing of 3 month BBSW plus 4.75% per annum, a 2.00% establishment fee (A$1.14M) and a 1.00% per annum commitment fee on undrawn amounts from signing to drawdown. Final pricing is to be confirmed in the term sheet, which is scheduled for issue on 28 November 2025.
- A hold of A$57.0M with no sell-down assumed at approval. Any later syndication or participation would be reported to the Committee.
- Financial covenants of maximum net leverage stepping from 4.50 times to 4.00 times, and minimum interest cover of 2.50 times, both tested quarterly (Section 8).
- First ranking security over all present and after-acquired property of the borrower and each material guarantor, share security over the borrower, and the guarantee and information package described in Section 5.

Approval is sought on the basis that satisfactory review of management accounts for the period to 31 October 2025, due on 14 November 2025, is a condition precedent. If those accounts show trading materially below the FY26 forecast, the matter will be returned to the Committee before the term sheet is issued.

3. The Transaction

3.1 Background

On 2025-07 (July 2025) the founding Whitcombe family shareholders executed a share sale agreement for the sale of the Greenhaul group to Ironleaf Partners Fund II. The agreement is subject to financing and customary conditions. The Information Memorandum is dated 11 August 2025 and the audited FY25 financial statements, prepared by Brandt Kessler Chartered Accountants, are dated 29 August 2025. Ironleaf has appointed Ellery Shaw Advisory for financial due diligence and Lowther Grey Lawyers as legal counsel to the borrower.

The purchase is on a cash-free, debt-free basis at an enterprise value of A$112.0M. The funds flow includes the refinancing of existing bank debt, transaction costs of A$4.0M (including our establishment fee of A$1.14M) and A$1.0M of cash left on the balance sheet at close.

3.2 Facility terms

Facility type	Senior secured acquisition term facility
Limit	A$57.0M
Tenor	60 months from financial close
Repayment	Bullet at maturity, with 1.0% per annum amortisation (A$0.57M per annum); A$54.15M outstanding at maturity if no prepayments
Purpose	Part fund the acquisition of the Greenhaul group by Ironleaf Partners Fund II, including refinancing of existing bank debt, transaction costs and A$1.0M of balance sheet cash
Interest margin	3 month BBSW plus 4.75% per annum, paid quarterly
Establishment fee	2.00% of the facility limit (A$1.14M)
Commitment fee	1.00% per annum on undrawn amounts
Financial covenants	Net leverage and interest cover, tested quarterly
Borrower	Greenhaul Waste Services Pty Ltd following the group restructure

Summary of proposed facility terms (indicative, subject to term sheet)

3.3 Sources and uses

Uses	A$M	% of total
Enterprise value (equity purchase and bank debt refinancing)	112.0	95.7%
Transaction costs, including financing fees	4.0	3.4%
Balance sheet cash at close	1.0	0.9%
Total uses	**117.0**	**100.0%**

Uses of funds

Sources	A$M	% of total
Quillwood senior acquisition term facility	57.0	48.7%
Ironleaf Partners Fund II equity	60.0	51.3%
Total sources	**117.0**	**100.0%**

Sources of funds

The structure is conservative relative to many sponsor-led transactions in the sector. The Sponsor is contributing more equity than debt, and the entry multiple of 7.4 times FY26 forecast EBITDA (8.2 times FY25 EBITDA) is supported by the independent enterprise valuation discussed below. The equity is to be fully funded at or before first drawdown. We do not rely on any vendor finance or deferred consideration.

3.4 Valuation and diligence

Report	Provider	Date
Information Memorandum	Vendor and Ironleaf	11 Aug 2025
Audited FY25 financial statements	Brandt Kessler Chartered Accountants	29 Aug 2025
Enterprise valuation	Halvorsen Pearce Advisory	19 Sep 2025
Plant and fleet valuation	Tallis Asset Valuers	19 Sep 2025
Independent technical and capex review	Corrigan Mott Engineering	26 Sep 2025
Management accounts to 31 Oct 2025	Greenhaul management	14 Nov 2025 (due)
Term sheet	Quillwood Credit Partners	28 Nov 2025 (planned)

Key reports and dates

Halvorsen Pearce Advisory's enterprise valuation, dated 19 September 2025, supports a value range of A$106.0M to A$118.0M, bracketing the purchase price of A$112.0M. At the low end of the range, the facility represents 53.8% of enterprise value (A$57.0M divided by A$106.0M). Tallis Asset Valuers assessed the OLV of plant and fleet at A$24.8M. Corrigan Mott Engineering reviewed the fleet replacement profile, the condition of the Wingfield MRF and the FY26 maintenance capex budget of A$6.1M, and concluded that the budget is supportable. Their recommendations on the sorting line and fire protection systems are carried into the conditions subsequent.

4. Borrower and Sponsor

4.1 Corporate history

Date	Event
March 2009	Founded in Adelaide by the Whitcombe family as a skip bin hire operator
October 2015	Commissioned the materials recovery facility at Wingfield SA
June 2019	Acquired Central Highlands Waste Pty Ltd, establishing a Victorian customer base
February 2022	Opened the Dandenong South VIC depot and expanded the commercial collection fleet
July 2025	Share sale agreement executed with the founding shareholders for the sale to Ironleaf Partners Fund II, subject to financing and customary conditions

Corporate milestones

4.2 Operations

Greenhaul collects waste from commercial, construction and local government customers using a fleet of 74 vehicles operated from three depots. Wingfield SA is the head office and the main operating hub, co-located with the MRF. Mount Gambier SA serves regional South Australia and the south east border region, and Dandenong South VIC serves south eastern Melbourne. Waste collected from commercial customers and from skip bins is either processed at the Wingfield MRF, where cardboard, metals and plastics are sorted and sold, or sent to third party facilities and landfill.

The business model has two revenue streams. Contracted and recurring collection services comprise 71% of FY26 forecast revenue, or approximately A$84.1M of the A$118.4M total, with multi-year commercial and local government agreements and regular scheduled lifts. Transactional skip bin hire and construction and demolition work make up the remaining 29% (approximately A$34.3M) and are more cyclical. Sales of sorted recyclables provide supplementary revenue and are exposed to commodity prices.

4.3 Management and governance

Name	Role
Daniel Ingram	Managing Director and Chief Executive Officer
Priya Iredale	Executive Director and Chief Financial Officer
Stephen Kallis	Non-executive Chair (Ironleaf Partners nominee)

Directors of the borrower group post-acquisition

Daniel Ingram, a member of the founding family, remains in the chief executive role after completion, which supports continuity of customer relationships and operating knowledge. Priya Iredale, as Chief Financial Officer, will be the primary contact for covenant reporting. Stephen Kallis will chair the board as an Ironleaf nominee. We will ask the Sponsor to confirm the terms of Mr Whitcombe's continuing equity or incentive arrangements and any non-compete undertakings, as these affect retention risk in a business where customer relationships are held locally.

4.4 Sponsor

The Sponsor is Ironleaf Partners Pty Ltd as manager of Ironleaf Partners Fund II. The equity of A$60.0M is to be contributed by Fund II and is the largest source of funds. Our diligence of the Sponsor's track record, fund capacity and prior experience in waste and logistics assets is ongoing, and we will confirm the following before the term sheet is signed: available uncalled commitments in Fund II after this investment, concentration limits that apply to the fund, and the Sponsor's historical conduct on covenant resets and equity cures. We propose a Sponsor equity cure right in the facility, limited in number, as described in Section 8.

5. Security and Collateral

5.1 Security package

- First ranking general security agreement over all present and after-acquired property of the borrower and each material guarantor, including plant, equipment, vehicles, receivables, contract rights, intellectual property and bank accounts.
- Guarantees and indemnities from the acquisition holding entities and each wholly owned operating subsidiary, including Central Highlands Waste Pty Ltd, to cover at least 90% of group EBITDA and gross assets.
- Share security over the borrower and each guarantor, provided by their immediate parent.
- First registered mortgages over freehold real property owned by the group, and for leased sites, landlord consents and access deeds in a form acceptable to Quillwood. A schedule of site tenure for the Wingfield, Mount Gambier and Dandenong South locations will be provided as a condition precedent.
- Assignment of the Sponsor's rights under the share sale agreement and related warranty and indemnity insurance, to the extent assignable.
- Subordination of any shareholder loans or related party debt, by deed.

5.2 Collateral coverage

Tallis Asset Valuers assessed the OLV of plant and fleet at A$24.8M. This covers 43.5% of the A$57.0M facility limit, so on a stressed asset recovery basis the facility remains reliant on enterprise value for the balance. Recovery in a distress scenario would depend on the going-concern value of the contracted collection book and the MRF, the licences attached to it, and the realisation of freehold property if any. We therefore consider this transaction principally a cash flow loan with asset support, and we have set covenant levels accordingly. We do not attribute value to customer contracts or MRF licences in the collateral cover analysis.

Environmental licensing is a feature of collateral enforcement in this sector. EPA licences for the Wingfield MRF and other sites are issued to the operator and are not freely transferable. The conditions of those licences, and any outstanding notices, will be reviewed by our counsel before financial close, and the facility will include an undertaking to maintain all licences in good standing.

6. Financial Analysis

6.1 Trading performance

A$M unless stated	FY25 actual	FY26 forecast
Revenue	106.9	118.4
Revenue growth	n/a	10.8%
EBITDA	13.6	15.2
EBITDA margin	12.7%	12.8%
EBITDA growth	n/a	11.8%
Maintenance capex	n/a	6.1
Recurring revenue share	n/a	71%

Summary financials (FY ends 30 June). FY25 per audited accounts; FY26 per sponsor case.

FY25 revenue was A$106.9M and EBITDA A$13.6M, a margin of 12.7%. The sponsor case for FY26 forecasts revenue of A$118.4M (up 10.8%) and EBITDA of A$15.2M (up 11.8%), with the margin broadly stable at 12.8%. We note the following about the forecast:

- Revenue growth of 10.8% is above what we would normally underwrite for a mature collection business. Ellery Shaw's financial due diligence attributes it to contract pricing and indexation, volume from recent depot investment, and a recovery in construction-related work. We have not been given a split that lets us verify each driver independently, and we will request it as part of confirmatory diligence.
- The sponsor case assumes conservative recycled commodity prices for FY26 only. Later years assume a normalisation of commodity prices that we do not underwrite.
- Margin stability at 12.8% assumes that diesel, labour and landfill costs are recovered through indexation in contracts. The proportion of contracts with fuel and levy pass-through clauses is a key diligence item.

6.2 Leverage, coverage and cash flow

Metric	FY26 value	Basis
Enterprise value to EBITDA	7.4x	A$112.0M / A$15.2M
LVR	50.9%	A$57.0M / A$112.0M
Net debt at close	A$56.0M	A$57.0M less A$1.0M cash
Net leverage (FY26)	3.7x	A$56.0M / A$15.2M
Net leverage (FY25 EBITDA)	4.1x	A$56.0M / A$13.6M
Interest cover (FY26)	3.2x	EBITDA / interest of about A$4.8M
EBITDA less maintenance capex	A$9.1M	A$15.2M less A$6.1M
Fixed charge cover	1.7x	A$9.1M / (interest + amortisation)
Net debt to EBITDA less capex	6.2x	A$56.0M / A$9.1M

Credit metrics at close on FY26 forecast (pro forma, annualised)

Interest cost is estimated at approximately A$4.8M per annum, based on an all-in rate of 8.35% (an assumed 3 month BBSW of 3.60% plus the 4.75% margin) on A$57.0M. Actual cost will vary with BBSW and any hedging. Pro forma interest cover of 3.2 times is adequate for the grade of credit, but cover of 1.7 times on a fixed charge basis after maintenance capex shows that cash flow after debt service is modest: about A$3.8M before tax, working capital movements and growth capex (A$9.1M less A$4.8M interest and A$0.57M amortisation). That is roughly 6.6% of the facility per annum, so deleveraging in the first three years will come mainly from EBITDA growth rather than debt repayment.

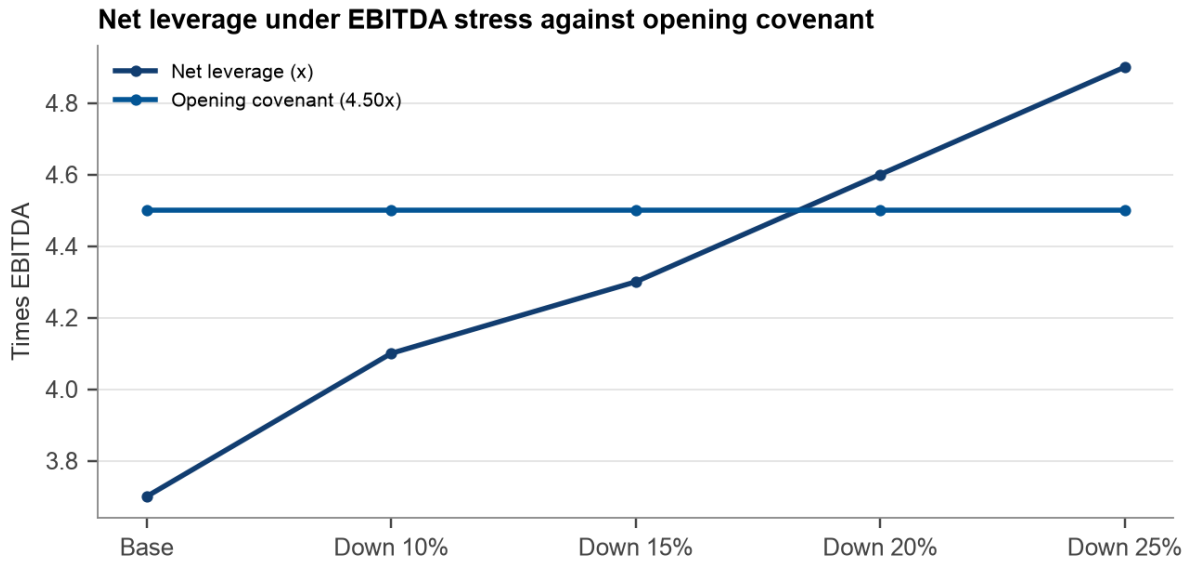

Maintenance capex of A$6.1M is 5.2% of forecast revenue and 40.1% of forecast EBITDA. This is typical of a fleet-intensive collection business. The Corrigan Mott review supports this level for FY26. However, vehicle replacement cycles are lumpy, and the facility will limit growth capex and require the Sponsor to fund discretionary expansion from equity or permitted equipment finance. We propose a permitted equipment finance basket of A$5.0M.

6.3 Sensitivity analysis

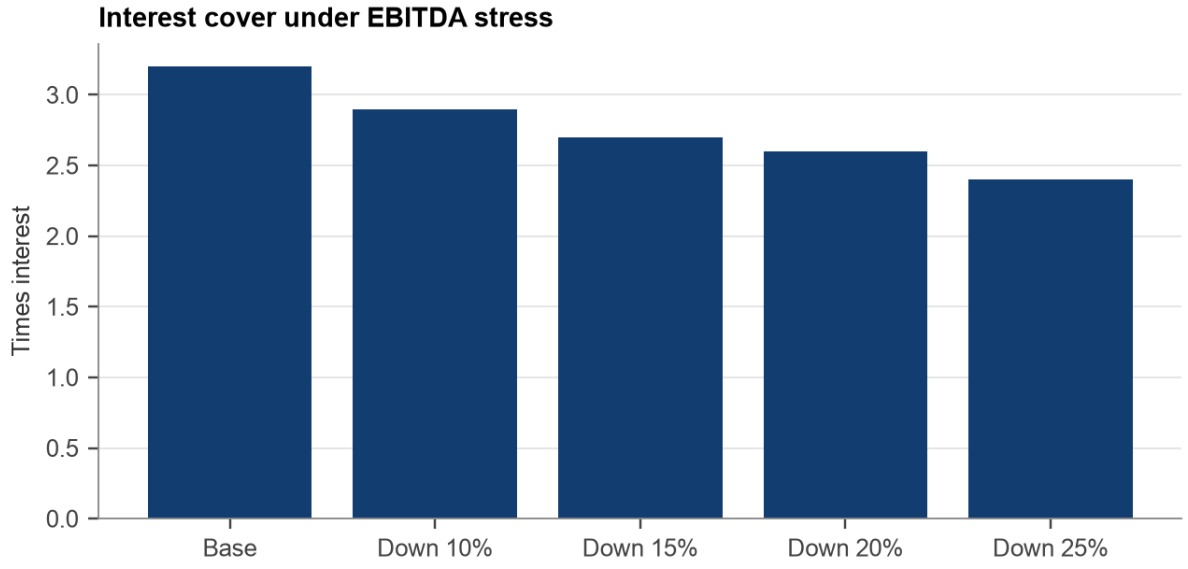

We tested the covenant package against reductions in FY26 EBITDA, holding net debt at A$56.0M and interest at about A$4.8M. This is conservative as it assumes no debt reduction and no cost response from management.

Case	EBITDA (A$M)	Net leverage	Interest cover
Base (sponsor case)	15.2	3.7x	3.2x
EBITDA down 10%	13.7	4.1x	2.9x
EBITDA down 15%	12.9	4.3x	2.7x
EBITDA down 20%	12.2	4.6x	2.6x
EBITDA down 25%	11.4	4.9x	2.4x

EBITDA sensitivity at close

Net leverage breaches the opening covenant at an EBITDA decline of about 18%.

Interest cover falls below the 2.50x covenant at an EBITDA decline of about 22%.

The leverage covenant is the binding test. At the opening level of 4.50 times, EBITDA could fall by about 18.1% (to A$12.4M) before a breach. The interest cover covenant of 2.50 times would be breached at an EBITDA decline of about 21.7% (to A$11.9M). If EBITDA is flat on FY25 at A$13.6M, net leverage would be 4.1 times, inside the opening covenant but with only about 9% headroom, and when the covenant steps to 4.25 times in December 2027 the headroom on unchanged net debt and EBITDA would fall to about 3%. The Committee should regard the early years as carrying real covenant risk if the forecast growth is not delivered, and we consider that risk acceptable only because

of the Sponsor's equity position and the cure rights we propose.

6.4 Returns

Based on the indicative terms, the facility yields a margin of 4.75% per annum over 3 month BBSW, plus a 2.00% establishment fee. Amortised over a three year expected average life, the fee adds about 0.67% per annum, giving an all-in margin of about 5.4% over BBSW, or approximately 9.0% per annum on the assumed BBSW of 3.60%. This is consistent with returns for senior secured sponsor-backed mid-market loans of comparable leverage and sector.

7. Key Risks and Mitigants

Risk	Key mitigant
Landfill levy and regulatory change	Contract pass-through; levy clause review
Commodity price exposure	Conservative case; commodity sensitivity
Construction downturn	71% recurring base; transactional limit
Fleet, fuel and driver costs	Indexation; fuel hedging policy; capex review
MRF fire, contamination, licence	Insurance; EPA conditions; site review
Leverage and integration	Equity; covenant steps; cure rights

Summary of key risks

7.1 Landfill levy and regulatory change

Increases to South Australian and Victorian waste levies, or tightened recycling standards, can compress margins if they cannot be passed through to customers under contract. The sector has had a sustained trend of higher levies, and customers on fixed-price contracts or tenders may resist recovery. Mitigants: we will review a sample of the largest contracts, and the legal diligence report must confirm what proportion of recurring revenue has levy and regulatory change pass-through. Recycling investment at the Wingfield MRF also reduces the volume sent to landfill, which limits exposure. We will include a covenant reporting requirement for levy cost as a share of revenue.

7.2 Commodity price exposure

Revenue from sorted cardboard, metals and plastics is volatile. The sponsor case assumes conservative prices for FY26 only. Beyond FY26 the case assumes higher prices, and we will not rely on that. Mitigants: commodity revenue is supplementary to collection revenue, and our sensitivity table, which tests EBITDA declines of up to 25%, covers a commodity price fall far larger than the sponsor's own downside. We will request a breakdown of commodity revenue and a price sensitivity from the Sponsor before financial close.

7.3 Customer concentration in construction

Transactional skip bin hire and construction and demolition work make up about 29% of FY26 forecast revenue (approximately A$34.3M) and are exposed to construction activity. A downturn would reduce volumes and could weaken pricing. Mitigants: the larger recurring base of 71% is spread across about 3,400 customers, including local government customers, and the fleet can be redeployed between collection types. We will request the top 20 customer list and revenue by customer type as part of confirmatory diligence, and the diligence report should show how much of the construction revenue is repeat business from account customers rather than one-off jobs.

7.4 Fleet and fuel costs

Diesel price movements, vehicle replacement cycles and driver availability can erode EBITDA if contract indexation lags cost increases. Labour is a significant cost with 286 FTE. Mitigants: Corrigan Mott has reviewed the fleet and replacement profile, the plant and fleet OLV of A$24.8M gives asset coverage, and we propose an undertaking to maintain a hedging and fuel pass-through policy acceptable to Quillwood. Vehicle capex above an agreed level is restricted and requires Quillwood consent.

7.5 Environmental and operational

The Wingfield MRF carries fire, contamination and licence compliance risk. Fires at resource recovery facilities are a known sector hazard and can interrupt processing, lead to regulatory action and increase insurance costs. Mitigants: the facility will require insurance acceptable to Quillwood (including business interruption), our interest noted on all policies, and compliance with all EPA licence conditions. A fire protection and stockpile management review is included in the conditions subsequent. A significant environmental incident would be an event of default if it leads to licence suspension or cancellation.

7.6 Leverage and integration

Net leverage of 3.7 times at close leaves limited headroom to the proposed covenant if FY26 EBITDA falls short of forecast, as shown in Section 6.3. The restructure that makes Greenhaul the borrower, and the transition from family ownership to a sponsor-owned business, add execution risk. Mitigants: the Sponsor contributes A$60.0M of equity, the covenants step down only gradually, we propose a limited equity cure right, and a 100 day integration and reporting plan will be agreed with the Sponsor. We will also require monthly reporting for the first 12 months.

8. Covenants and Undertakings

8.1 Financial covenants

Covenant	Level	Test
Maximum net leverage	4.50x to 31 Dec 2026	Quarterly, rolling 12 months
Maximum net leverage	4.25x to 31 Dec 2027	Quarterly, rolling 12 months
Maximum net leverage	4.00x thereafter	Quarterly, rolling 12 months
Minimum interest cover	2.50x	Quarterly, rolling 12 months

Proposed financial covenants (net leverage is net debt to EBITDA)

Covenants will be tested quarterly on a rolling 12 month basis, using pro forma EBITDA for the period before completion where the numbers are verified by the financial due diligence adviser. The first test date will be 31 March 2026 on an annualised basis, to be set out in the term sheet. The covenant levels give an initial EBITDA headroom of about 18% on leverage and about 22% on interest cover relative to the sponsor case. We have not offered more headroom, because covenants set more loosely would not protect the position if the forecast growth is not delivered.

8.2 Other terms

- Equity cure: up to two cures in any four consecutive quarters, and no more than four over the life of the facility, by way of subordinated equity, counted as EBITDA or applied to debt reduction.
- Cash sweep: 50% of excess cash flow where net leverage exceeds 3.50 times, tested annually.
- Mandatory prepayment on asset sales above an agreed threshold not reinvested within 12 months, change of control, and insurance or compensation proceeds.
- Hedging: interest rate hedging for at least 50% of drawn debt for a minimum of 36 months from financial close.
- Distributions: no dividends or shareholder payments while net leverage exceeds 3.50 times or if a default is continuing.
- Capex: growth capex limited to an agreed annual amount, and a permitted equipment finance basket of A$5.0M.
- Information: audited annual accounts within 120 days, quarterly management accounts and compliance certificates within 30 days, monthly management accounts for the first 12 months, an annual budget, and notice of any environmental incident, licence notice or insurance claim above an agreed amount.
- Change of control and Sponsor ownership: Ironleaf Partners Fund II to retain control and at least 51% of the equity.

9. Conditions Precedent and Subsequent

9.1 Conditions precedent to first drawdown

- Satisfactory review of management accounts for the period to 31 October 2025 (due 14 November 2025), showing trading consistent with the FY26 forecast.
- Execution of the facility agreement, security documents, guarantees, and the intercreditor and subordination deeds, in a form satisfactory to Quillwood and its counsel.
- Evidence that Sponsor equity of A$60.0M has been contributed in cash or is contributed simultaneously with drawdown.
- Final share sale agreement, with no material amendment since July 2025, and confirmation that all conditions to completion (other than funding) are satisfied.
- Final financial due diligence report from Ellery Shaw Advisory, enterprise valuation from Halvorsen Pearce Advisory, plant and fleet valuation from Tallis Asset Valuers and technical report from Corrigan Mott Engineering, each with reliance letters in favour of Quillwood.
- Legal due diligence report, including confirmation of EPA and other licences, site tenure, material contract terms (including levy and fuel pass-through) and litigation.
- Compliance with the financial assistance provisions of the Corporations Act 2001 (Cth), including any shareholder approval required under sections 260A to 260D.
- Evidence of insurance cover, including property, business interruption, public liability and environmental cover, with Quillwood's interest noted.
- Know your customer, anti-money laundering and sanctions checks on the Sponsor, the borrower group and the directors, to Quillwood's satisfaction.
- Confirmation of the funds flow and payout letters from existing financiers, with release of existing security.
- No material adverse change, and no event of default, at the time of drawdown.

9.2 Conditions subsequent

Condition	Timing after close
Group restructure complete; Greenhaul Waste Services Pty Ltd accedes as borrower and grants security	Within 60 days
Interest rate hedging in place for 50% of drawn debt	Within 30 days
Landlord consents and mortgagee access deeds for leased sites	Within 60 days
Fire protection and stockpile management review of the Wingfield MRF	Within 90 days
Implementation of Corrigan Mott recommendations on sorting line and fire systems	Within 6 months
Registered mortgages over any freehold property	Within 60 days
Review of top 20 customer contracts for levy and fuel pass-through	Within 90 days

Proposed conditions subsequent

10. Approvals and Sign-off

The deal team confirms that this paper accurately reflects the information provided by the Sponsor, the borrower and their advisers as at the date of this paper, and that figures have been derived consistently from those sources. Management accounts for the period to 31 October 2025 (due 14 November 2025) and the term sheet (planned for 28 November 2025) are not reflected in this paper. The Investment Committee is asked to approve the facility on the terms in Section 2.
